

M. SHAHARYAR

Technical Founder & Advisor & Fullstack Engineer

Pakistan, Remote Worldwide

shaharyar321321@gmail.com | shaharyar.dev | cal.com/shaharyar-dev

PROFESSIONAL SUMMARY

Technical founder and fullstack developer with production systems experience and proven track record building platforms from 0 to 1. Built 250k LOC collaborative platform serving 1000+ users. Specialize in real-time systems, semantic search, and AI-powered applications.

EXPERIENCE

Founder & Lead Engineer, Novus Atlas (NOVA) **June 2024 - Present**

Collaborative Writing Platform | 1000+ Beta Users

- Architected and built 250k+ LOC production platform solo in 12 months
- Designed custom Rust NLP engine for semantic content analysis at scale
- Designed low-latency collaborative writing experience with real-time cursor presence, conflict-free editing, and interruption-resistant UX
- Designed semantic discovery workflows improving content navigation and reducing search friction for large-scale fiction libraries (Qdrant)
- Created branch-based version control for creative content (Git for fiction)
- Tech: TypeScript, Next.js, Rust, PostgreSQL, Qdrant, WebSockets

Product & UX Highlights

- Designed immersive, reader-focused interfaces emphasizing clarity, atmosphere, and low cognitive friction
- Built multi-pane authoring workspace optimized for longform narrative workflows and collaborative editing
- Developed reusable design system with modular UI primitives, responsive layouts, and adaptive interaction states
- Focused heavily on perceived performance through streaming UI, skeleton loading, optimistic updates, and motion design
- Iterated on interface architecture using direct beta-user feedback and behavioral observation

Kicklayer - Founder & Lead Developer - SaaS for Agencies **Present**

Client Onboarding & Asset Collection Platform

- Architected and built end-to-end onboarding system eliminating project-start delays for small agencies
- Designed adaptive onboarding flows with progressive disclosure and conditional UI states to reduce client friction
- Implemented secure client portal with token-based access (multi-token, expiry, revocation, access logs)
- Built encrypted credential vault (AES-256-GCM) with secure export and secret detection
- Developed AI-powered quality analysis and automated project brief generation with version history
- Engineered delay risk scoring and adaptive reminder system with policy tracking
- Implemented full audit timeline with field-level versioning and diff history
- Designed subscription enforcement and feature gating (Starter/Pro) with billing webhooks
- Tech: TypeScript, Next.js, tRPC, PostgreSQL, R2 (presigned uploads), AES-256-GCM, OpenAI APIs

KEY PROJECTS

OpenOT – Operational Transformation Engine **Open Source**

Real-time Collaboration Framework

- Production-ready OT implementation powering collaborative editors
- Framework-agnostic with pluggable transport (WebSockets, SSE) & storage
- State-machine based transformation logic for conflict-free editing
- Integration kits for popular editors (Lexical, React)

TECHNICAL SKILLS

Languages: TypeScript, Rust, Python, SQL

Frameworks: Next.js, React, Hono, Node.js, Electron

Databases: PostgreSQL, Qdrant (Vector), Redis, MySQL

Specializations: Real-time Systems (OT/CRDT), NLP & Semantic Search, AI Integration, High-Performance Architecture

UI/UX: Design Systems, Information Architecture, Interaction Design, Responsive UX, Accessibility, Collaborative Editing UX
